The Pension Research Council

The Pension Research Council of the Wharton School at the University of Pennsylvania is committed to generating debate on key policy issues affecting pensions and other employee benefits. The Council sponsors interdisciplinary research on private and social retirement security and related benefit plans in the United States and around the world. It seeks to broaden understanding of these complex arrangements through basic research into their economic, social, legal, actuarial, and financial foundations. Members of the Advisory Board of the Council, appointed by the Dean of the Wharton School, are leaders in the employee benefits field, and they recognize the essential role of social security and other public-sector income maintenance programs while sharing a desire to strengthen private-sector approaches to economic security (for more information, see http://www.pensionresearchcouncil.org).

The Boettner Center for Pensions and Retirement Security

Founded at the Wharton School to support scholarly research, teaching, and outreach on global aging, retirement, and public and private pensions, the Center is named after Joseph E. Boettner. Funding to the University of Pennsylvania was provided through the generosity of the Boettner family whose intent was to spur financial well-being at older ages through work on how aging influences financial security and life satisfaction. The Center disseminates research and evaluation on challenges and opportunities associated with global aging and retirement, how to strengthen retirement income systems, saving and investment behavior of the young and the old, interactions between physical and mental health, and successful retirement (for more information, see http://www.pensionresearchcouncil.org/boettner/).
