## PURPOSE OF THE COUNCIL

Founded in 1952, the Pension Research Council is one of several research organizations within the Wharton School of the University of Pennsylvania. As part of the nation's first school of business, the Council functions in a bracing environment of academic freedom and objectivity. The basic purpose of the Council is to undertake research that will have the effect of strengthening those arrangements designed to provide the financial resources needed for a secure and dignified old age. It seeks to broaden public understanding of these complex arrangements through basic research into their social, economic, legal, actuarial, and financial foundations. Although geared to the long view of the pension institution, projects undertaken by the Council are always relevant to real world concerns and frequently focus on issues under current debate.

The Council is composed of individuals from large corporate plan sponsors, organized labor, actuarial consulting firms, the accounting profession, the legal profession, investment counselors, banks, insurance companies, not-for-profit organizations, and several academic disciplines. The Council does not speak with one voice and espouses no particular point of view. The members do share a general desire to encourage and strengthen private-sector approaches to old age economic security, while recognizing the essential role of social security and other income maintenance programs in the public sector.

The members of the Council are appointed by the Dean of the Wharton School and serve indeterminate terms. The Council reviews the findings of current research projects, acts to generate new research proposals, and reviews external proposals. In performing these functions, the members identify areas in which additional research is needed, consider the general

form the research should take, then evaluate the qualifications of persons deemed capable of carrying out the approved projects.

The research projects are carried out by persons commissioned under individually designed ad hoc arrangements. The researchers are normally academic scholars, but nonacademic experts with special qualifications for the tasks involved may be used. The research findings are reviewed by members of the Council, who may offer criticism as to both the substance of the report and the inferences drawn from the studies. The author of any manuscript is free to accept or reject the criticisms of the Council members, but the latter have the privilege of recording in the published document their dissent from any interpretative statements or points of view expressed by the author. Whether or not written dissents are included, publication should not be interpreted to indicate either agreement or disagreement by the Council or its individual members with the substance of the document or its inferences.

## ACKNOWLEDGMENTS

My interest in Japanese retirement policies developed during a series of visits to Japan in 1988–89. On these occasions, I was a visiting researcher at Nihon University Population Research Institute in Tokyo. The staff of NUPRI was very generous in providing research resources and helping locate numerous pension experts in Japan. I wish to thank Hideo Ibe, Japan Foundation for Research and Development of Pension Schemes; Eiji Mizutani and David Crawford, The Wyatt Co.—Tokyo; Kiyoshi Owada, president of Pension Fund Association; Junichi Sakamoto, deputy director, Actuarial Affairs Division, Pension Bureau, Ministry of Health and Welfare; Toshio Suzuki, Japan Federation of Employers' Association; and Noriyasu Watanabe, Research Institute of Life Insurance Welfare, for taking time to discuss the Japanese pension system with me. Kiyoshi Murakami, Nippon Dantai Life Insurance Company, provided several of his papers and other pension information. A special thanks goes to Naohiro Ogawa, NUPRI, who made my trips to Japan possible and taught me about the economic and demographic conditions of Japan. Toru Nakaya provided valuable translation assistance. Richard Ippolito has made many valuable comments on several drafts of this manuscript.
